Conditionals and Loops

Conditionals and Loops

A simple function

```
def name_of_the_function(input1, input2):
    # function code
    none
```

A simple function

```
def name_of_the_function(input1, input2):
    # function code
    none
```

Calling the function

```
name_of_the_function("hi", "ho")
```

A simple function

```
def name_of_the_function(input1, input2):
    # function code
    none
```

Calling the function

```
name_of_the_function("hi", "ho")
```

Another valid call

```
name_of_the_function(hi, ho)
```

4/7

A simple function

```
def name_of_the_function(input1, input2):
    # function code
    none
```

Calling the function

```
name_of_the_function("hi", "ho")
```

Another valid call

```
name_of_the_function(hi, ho)
```

An invalid call

```
name_of_the_function(hi)
```

```
greeting_inputs = ("hey", "morning", "evening", "hi",
                "whatsup", "hello")
greeting_responses = ["hey", "hey hows you?", "*nods*",
                "hello, how you doing", "hello",
                "Welcome, I am good and you"]
def generate_greeting_response(input):
    for token in input.split():
        if token.lower() in greeting_inputs:
            return random.choice(greeting_responses)
```

Derived from

https://stackabuse.com/python-for-nlp-creating-a-rule-based-chatbot/

```
greeting_inputs = ("hey", "morning", "evening", "hi",
                "whatsup", "hello")
greeting_responses = ["hey", "hey hows you?", "*nods*",
                "hello, how you doing", "hello",
                "Welcome, I am good and you"]
def generate_greeting_response(input):
    for token in input.split():
        if token.lower() in greeting_inputs:
            return random.choice(greeting_responses)
```

- greeting_inputs is a set
- greeting_responses is a list

Derived from

https://stackabuse.com/python-for-nlp-creating-a-rule-based-chatbot/

```
greeting_inputs = ("hey", "morning", "evening", "hi",
                "whatsup", "hello")
greeting_responses = ["hey", "hey hows you?", "*nods*",
                "hello, how you doing", "hello",
                "Welcome, I am good and you"]
def generate_greeting_response(input):
   for token in input.split():
        if token.lower() in greeting_inputs:
            return random.choice(greeting_responses)
```

```
generate_greeting_response("hi")
```

6/7

```
generate_greeting_response("hi")
```

```
generate_greeting_response("ciao")
```
